

Employee Attrition Analysis & Retention Intelligence System

Project Charter

Project Overview

Employees are one of the most valuable assets of any organization. However, many companies face challenges when employees leave frequently. High employee attrition increases hiring costs, affects productivity, and creates difficulties in maintaining a stable workforce.

The purpose of this project is to analyze employee data, understand the reasons behind employee attrition, and provide insights that can help organizations improve employee retention. The project will use data analysis, business intelligence tools, and predictive analytics to support better decision-making.

Problem Statement

The organization is experiencing employee turnover across different departments. Management does not have a clear understanding of the factors that influence employees to leave the company.

Without proper analysis, it becomes difficult to take effective actions to improve employee satisfaction and retention.

Project Objective

The main objective of this project is to identify the key factors that contribute to employee attrition and provide data-driven recommendations to reduce employee turnover.

The project aims to:

- Analyze employee attrition trends
- Identify departments with higher attrition rates
- Study the impact of salary, overtime, age, and job role on attrition
- Build dashboards for better visualization
- Predict employees who may be at risk of leaving
- Recommend strategies to improve employee retention

Project Scope

In Scope

- Employee attrition analysis
- Department-wise analysis
- Salary and overtime analysis
- Dashboard development
- Attrition prediction
- Business recommendations

Out of Scope

- Recruitment processes
- Payroll management
- Attendance tracking
- Employee performance evaluation

Stakeholder	Role
HR Manager	Monitor attrition and improve retention
Department Managers	Manage employee engagement
CEO / Management	Make strategic business decisions
Employees	Benefit from improved workplace practices
Business Analyst	Analyze data and provide recommendations

Stakeholders

Key Business Questions

This project will help answer the following questions:

1. What is the overall employee attrition rate?
2. Which departments have the highest attrition?
3. Does overtime affect employee turnover?
4. Is there a relationship between salary and attrition?
5. Which employee groups are more likely to leave?
6. Can attrition be predicted using historical data?

Expected Deliverables

- Project Charter
- Business Requirements Document (BRD)
- Requirement Analysis Document
- Process Flow Diagrams
- SQL Analysis
- Power BI Dashboard
- Attrition Prediction Model
- Business Insights Report
- Final Presentation

Success Criteria

The project will be considered successful if:

- Key attrition factors are identified
- Useful business insights are generated
- Interactive dashboards are created
- Employee attrition risk can be predicted
- Recommendations support better retention decisions

Expected Outcome

The project will provide a better understanding of employee attrition and help management make informed decisions. By identifying the main reasons behind employee turnover, the organization can take proactive steps to improve employee satisfaction and retention.
